

Laravel Framework

Routing • Blade • Eloquent • CRUD • Auth

What We'll Cover

01

Setup & Installation

XAMPP + Composer + VS
Code

02

The Foundation

Routes, Blade, Controllers

03

Database & Eloquent

Migrations, ORM

04

CRUD & Validation

Create, Read, Update,
Delete

05

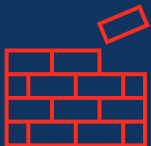

Auth & Relationships

Breeze

What is Laravel?

Ever wonder how apps like Netflix, Twitch, or Spotify are built?

Laravel is the framework that makes PHP powerful, elegant, and fun to write.

MVC Pattern

Separates your logic, data and presentation cleanly

Clean Code

Write less, do more => simple and readable syntax

All-in-One

Login, database, email — everything you need, built in

What You'll Build

By the end of this tutorial, you'll have a fully working web app with:

1

User Registration & Login

A secure auth system — sign up, log in, and manage accounts

2

Full CRUD Operations

Create, read, update, and delete records — the core of any real app

3

Clean Dashboard UI

A polished interface built with Blade templates and styled layouts

4

Database-Powered Pages

Dynamic pages pulling real data with Eloquent models and routes

Phase 01 — Setup & Installation

1

Add PHP to System PATH

C:\xampp\php → System Variables → Path

1

Add PHP to System PATH

C:\xampp\php → System Variables → Path

Edit environment variable

C:\Program Files\NVIDIA GPU Computing Toolkit\CUDA\v12.6\bin

```
PS C:\xampp\htdocs\my-app> php -v
```

```
PHP 8.1.25 (cli) (built: Oct 25 2023 08:06:57) (ZTS Visual C++ 2019 x64)
```

```
Copyright (c) The PHP Group
```

```
Zend Engine v4.1.25, Copyright (c) Zend Technologies
```

Phase 01 — Setup & Installation

1

Add PHP to System PATH

`C:\xampp\php` → System Variables → Path

2

Install Composer

`getcomposer.org` → point installer to `php.exe`

2

Install Composer

getcomposer.org → point installer to php.exe

- PS C:\xampp\htdocs\my-app> **composer** -V
Composer version **2.9.5** 2026-01-29 11:40:53
PHP version **8.1.25** (C:\xampp\php\php.exe)
Run the "diagnose" command to get more detailed diagnostics output.

Phase 01 — Setup & Installation

1

Add PHP to System PATH

`C:\xampp\php → System Variables → Path`

2

Install Composer

`getcomposer.org → point installer to php.exe`

3

Create Laravel App

`composer create-project laravel/laravel my-app`

Phase 01 — Setup & Installation

1

Add PHP to System PATH

`C:\xampp\php → System Variables → Path`

2

Install Composer

`getcomposer.org → point installer to php.exe`

3

Create Laravel App

`composer create-project laravel/laravel my-app`

4

Start the Dev Server

`php artisan serve → open localhost:8000`

Start the Dev Server

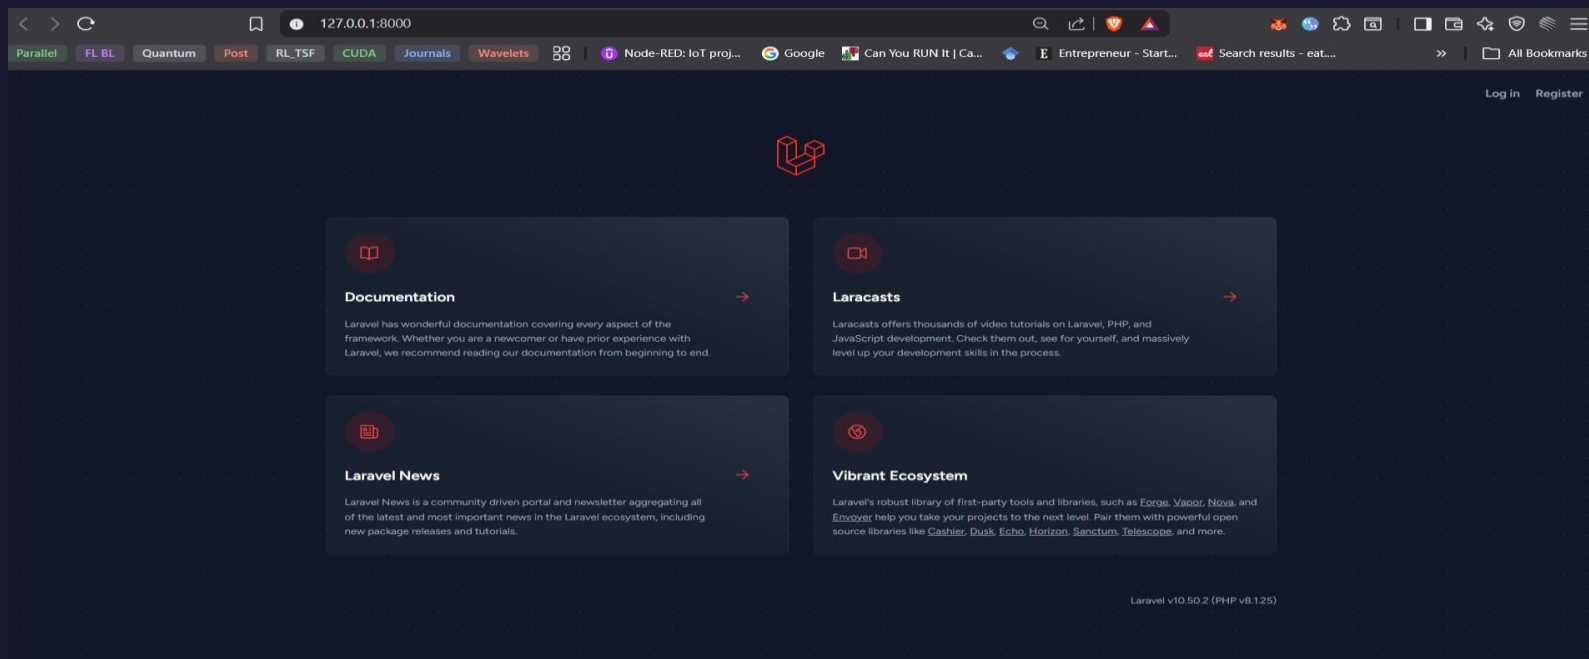

`php artisan serve` → open `localhost:8000`

```
PS C:\xampp\htdocs\my-app> php .\artisan serve

  INFO  Server running on [http://127.0.0.1:8000].

  Press Ctrl+C to stop the server

2026-04-01 11:39:45 .....
2026-04-01 11:39:50 /favicon.ico .....
```

Phase 01 — Setup & Installation

1

Add PHP to System PATH

`C:\xampp\php → System Variables → Path`

2

Install Composer

`getcomposer.org → point installer to php.exe`

3

Create Laravel App

`composer create-project laravel/laravel my-app`

4

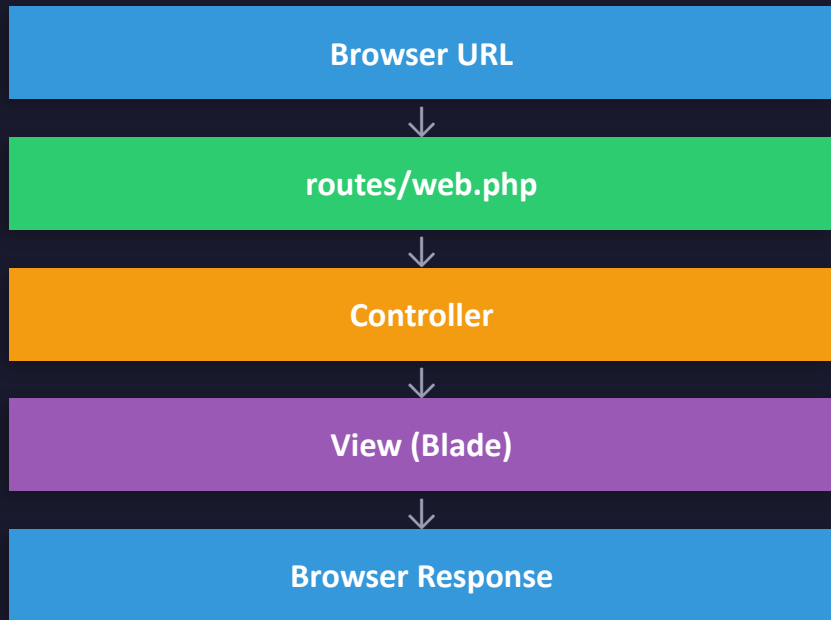

Start the Dev Server

`php artisan serve → open localhost:8000`

Restart VS Code after any PATH change — terminals don't pick up new variables until restarted!

Phase 02 — The Foundation

How Laravel Handles a Request

Key Concepts

Route

```
Route::get('/path', fn)
```

URL Param

```
Route::get('/{name}', fn($name))
```

Print var

```
{{ $variable }}
```

Layout

```
@extends / @yield / @section
```

Artisan

```
php artisan make:controller
```

Phase 03 — Database & Eloquent

Essential Commands

```
php artisan make:migration create_posts_table
```

Create a migration file

```
php artisan make:factory PostFactory
```

Create a data factory

```
php artisan migrate
```

Run migrations — creates DB tables

```
php artisan db:seed
```

Seed database with fake data

```
php artisan make:model Post
```

Create an Eloquent model

```
php artisan tinker
```

Interactive shell for DB queries

Eloquent ORM — No SQL Needed

Talk to your database using pure PHP

Get All

```
Post::all()
```

Find by ID

```
Post::find(1)
```

Create

```
Post::create(['title' => '...'])
```

Update

```
$post->update(['title' => '...'])
```

Delete

```
$post->delete()
```

Count

```
Post::count()
```

Where

```
Post::where('title', 'Hi')->get()
```

First

```
Post::first()
```

Phase 04 — CRUD & Validation

```
php artisan make:controller PostController --resource
```

index()

GET /posts

List all posts

edit()

GET /posts/{id}/edit

Show edit form

create()

GET /posts/create

Show create form

update()

PUT /posts/{id}

Update in DB

store()

POST /posts

Save new post

destroy()

DELETE /posts/{id}

Delete from DB

show()

GET /posts/{id}

Show one post

Phase 05 — Auth & Relationships

Laravel Breeze — Full Auth in 4 Commands

- 1 `composer require laravel/breeze --dev`

- 2 `php artisan breeze:install blade`

- 3 `npm install && npm run dev`

- 4 `php artisan migrate`

Thank You!

You now know how to build a real Laravel app from scratch.

Routes & Blade

Eloquent ORM

CRUD & Auth
